

Assignment 2

TCS-362

Neural Network and Deep Learning

UNIT – 2: Neural Network Basics

Q1:-Explain how a neural network computes its output.	CO3	AP
Q2:-Explain Hebbian learning rule with an example.	CO1	UN
Q3:-Explain why activation function derivatives are required.	CO1	AP
Q4:-What is the exploding gradient problem?	CO2	AN
Q5:- Explain the terms:	CO3	AP
(i):- vectorization		
(ii):- activation functions		
(iii):- batch vs mini-batch gradient descent
